C200 Series
0 to 5000 psig Cartridge Check Valve

Features
- Large flow capacity
- Compact design
- Floating o-ring

Benefits
- Maintenance free flow
- Easy installation
- Zero leak
- Quiet closing
- Automatic compensation for wear

Note: Proper filtration is recommended to prevent damage to sealing surfaces.

How it Works

Open
Full flow passages offer minimum restriction to flow. Spring is completely removed from flow path.

Closing
Floating o-ring automatically establishes line contact with conical metal surfaces of poppet and seat to cushion closing and assure perfect sealing.

Closed
O-ring only seals. Full pressure load is carried by metal-to-metal seat. Increasing pressure increases sealing efficiency—metal seat prevents any possibility of deformation or extrusion of o-ring.

** For typical flow rates, see the 200/300 Series catalog sheet.
(-1Q = -1PP; -2Q = -2PP; -4Q = -4PP; -6Q = -6PP)

How to Order

O-RING MATERIAL, TEMPERATURE & CRACKING PRESSURE RANGES

- 49 Buna N, -65°F to +250°F, 2.0–4.0 psig
- 59 Buna N, -65°F to +275°F, 0.5–1.0 psig
- 20 Teflon®, -100°F to +400°F, 8 psig maximum
- 32 Viton®, -20°F to +400°F, 0.5–1.0 psig

BODY MATERIAL

- A 2024–T4/T351 aluminum™
- A1 6061–T6/T651 aluminum™
- S Steel
- T 303 stainless steel
- T1 316 stainless steel

Please consult Circle Seal Controls or your local distributor for information on operating pressures, temperature ranges and reseal pressures.

Leakage

External: Zero
Internal:
Elastomeric seals: Zero
Teflon® seals: 0–50 psig = 5cc/min max.
50+ psig = 0.5cc/min max.

Cracking Pressure

Minimum cracking pressure available: 0.1 psig
Maximum cracking pressure available: 25 psig

Note: Cracking pressure is defined as pressure at which flow is 5cc/min, except for C220 Series, for which flow is approximately 0.07 cfm. When ordering a cracking pressure within the standard range or below the standard range of cracking pressure, the dash number is a "maximum". Example: C259–1Q–3 (cracking pressure tolerance will be ±0%, ±10%). When ordering a cracking pressure equal to or greater than the upper limit of the standard cracking pressure shown above, cracking pressure tolerance will be ±10%. Example: C259–1Q–5. Cracking pressure over 8 psig should not be specified without consulting the factory. Where C220 Series valves are supplied with higher cracking pressures, a shroud ring may be used to confine the o-ring.

For cracking pressures less than standard, consult factory for leakage rates.

Viton® is a registered trademark of DuPont Dow Elastomers.
Teflon® is a registered trademark of the DuPont Company.

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.
